Brand Story Script

A few tips before you start:

1. **Keep it simple**
   Start by writing everything out how you would explain it to your customer face to face. Clear is better than clever - focus on getting your messaging across clearly first and then you can always add some clever later on.

2. **Let go of perfectionism**
   Don’t let overthinking stop you getting it done, you can always refine your messaging as you start to work with actual customers and work out what messaging works with them.

A character

Who is your customer? What struggle are they facing right now?

Example: A photographer with a website that isn't effectively attracting potential clients, resulting in a lack of leads and business growth.

- **Primary** Project managers of SaaS and Mobile Apps facing conversion and/or retention problems with their users. These problems are drilling their business down and they are lacking user centric methods to tackle the current challenges and boost user engagement.

- **Secondary** Marketing Agencies and Professionals providing services services to small companies which leads to a constant demand for Marketing Materials.

External Problem

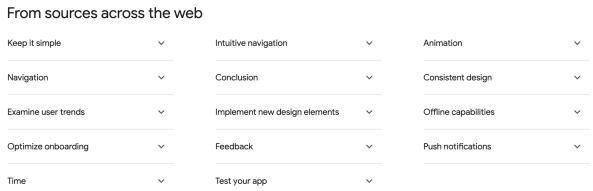
This is your customers surface level need. What is your customer typing into Google when they are looking for a service/product like yours?

Example: I need a web designer to help me attract more potential clients.

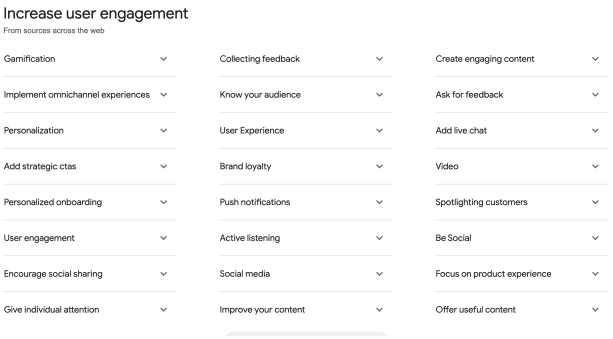
- How can I increase retention in my app?
  How can I increase user engagement?
  How to make my app easy to use?

product-led growth

improve customer journey



How to make my app easy to use?



How can I increase user engagement?

Internal Problem

What feelings are they having because they don't have a solution to their external problem?

Example: Feeling frustrated by low budget leads and lack of business growth despite their passion and talent.

Feeling pressured to keep up with the AI trend and add customisation capabilities into their products.

- Feeling frustrated because despite the efforts they are not able to increase the user retention which keep the acquisition costs high.
- Feeling frustrated because you are not allowed to allocate time and budget into user research to improve the customer journey.
- Feeling behind on how to use influencers to generate credibility and drive awareness to their business.

Philosophical Problem

Why is it wrong that your customers would experience this problem? Usually begins with "you shouldn't have to..."

Example: You shouldn’t have to work so hard to convince low-budget leads of the value of your work.

- You shouldn’t be managing so many hats by yourself. Be drowning among firefighting bugs, reporting to stakeholders, preparing epics, customer research.
  You shouldn't be penalized for having to manage so many demands with impractical deadlines to meet the desires and opinions of stakeholders who have little or no knowledge about the needs and desires of users.
  You shouldn’t waste so much time making and defending decisions with little to none user research and validation.

Você deveria ter uma ajuda que entende de necessidades do negócio e de encantamento de clientes para ajudar a guiar o desenvolvimento do produto.

Villain

What’s stopping the customer from achieving their goals or desired transformation? Usually related to time, money, mindset or lack of knowledge.

▼ **Examples**

Time: Spending an excessive amount of time and energy chasing new clients

Money/Mindset: Reluctant to invest in their online presence

Lack of knowledge: Website it functioning ok, but not great and not sure what the missing piece is.

- Time/Resources: Spending an excessive amount of time and energy on rework for lack of test and validation before publishing.
  Lack of Knowledge: Your onboarding is not user friendly enough pushing the churn rate up and you lack the resources to tackle the problem effectively.
  Money: Reluctant to invest in a ux research process to increase user engagement and reduce acquisition cost.

Positive Outcomes

List the positive outcomes or transformation they'll experience after working with you. This is about results and transformation rather than the features of your product.

▼ **Examples**

Set yourself apart as the go-to expert in your industry

Raise your brand presence to attract higher budget clients who are excited to work with you

More time to focus on the parts of your business that you love

Grow your business and confidently raise your rates.

You'll have access to help and expertise that understands business needs and how to delight customers to help you guide product development.

Better user engagement, higher conversion rates, and increased retention by removing friction points in the user experience.

Eliminate weeks of searching, interviewing, hiring, and training freelancers.

Plan

Now that you have a beginning, so the problem your client is currently facing. And an ending, positive outcomes you can help them get. You need to give them a clear step-by-step plan to get from A to B.

This should be a simple step-by-step process that makes it easy for your customers to say “YES” right away.

Your process may have 15 smaller steps in between, but the point is that your customer doesn't need to know every step in order to get started. If you confuse you lose, so keep it simple.

▼ **Examples**

1. It starts with a quick chat about your business and the goals for your website.
2. In our strategy session, we’ll work with you to craft a custom website strategy based on your long term goals.
3. Leave the rest to us and we’ll get to designing. When you’re happy we’ll help you hit launch on your new website!

1️⃣ **Sign Up**
Choose a design plan that better suits your needs. Don’t worry, you won’t be charged until the first kickoff call.

2️⃣ **Kick off**
Have a quick chat to see if it’s a match. Introduce you to our team, and the lead designer on your project.

3️⃣ **Start Shipping**
Delve deep into your goals, determine user needs, and (of course) design powerful experiences your users can’t get enough of.

4️⃣ **Love Us Or Leave Us**
We're so confident that you’ll love our unlimited, one-of-a-kind services, that we offer a 7-day money-back guarantee. No contracts. No questions asked.

Empathy

Understand and communicate empathy for your customer's challenges.

How can you use your past experience to show that you understand your customers problems and know how to solve them?

▼ **Example**

I started my design business to escape the 9-5, but soon enough I was working my ass off 24/7. Struggling to find clients and looking around at everyone else wondering what I was doing wrong.

It wasn’t until I really got clear on my messaging and learnt how to apply this to my marketing and website, I went from struggling to find clients that would pay me $500 to attracting my first $5000 client within weeks.

Anyone can build a website, but I wanna build you a money-making machine that leaves clients EXCITED to throw their money at you.

Since the early 2000s, I've worked with global clients like Coke, World Bank, TEDxBarcelona, and Rolls Royce.
For the past ten years I’ve been acting as a consultant working with or within companies. My key responsibilities were cooperating with cross functional teams to craft high-level visions and design for products and services. Either working with PMs and stakeholders to understand business and customer needs or collaborating with engineers in the creation of the outcomes with our products and services.
Enjoy peace of mind while we design users experiences your people can't get enough of.

Authority

Show that you have what it takes to help your customer overcome those problems.

This is about showing results: past clients, testimonials, case studies, portfolio examples.

As a Full stack Designer, I analyzed feedback, developed wireframes, improved design consistency, always aiming to push an user centric approach to enhance the user experience.
My superpower is transforming user needs into intuitive and accessible design solutions that can lead to better user engagement, higher conversion rates, and increased retention by removing friction points in the user journey.

Help them avoid failure

Gently remind your customer what will happen if they fail to solve their problems.

Example: The won’t grow or get what they want. Losing money, wasting time, increasing stress, constantly feeling overwhelmed.

As a founder, you have plenty of options.
You have your own internal reasons to justify all the decisions you've made along the way, and most likely you're quite certain about them. And I don't blame you for that! So your first option is...keep doing thing the same way you are already doing and struggle to find and onboard designers every time you have a new project.
However if you want to reduce the hassle of having top quality design work that can help build a delightful product that is easy to use and visually striking you should consider a design subscription.
Subscription-based models are cost-effective because they allow you to budget in advance, as you'll know exactly how much you are spending on outsourced graphic design each month.
By onboarding a top-quality subscription once, you'll know that the designers understand the needs of your business, so they can deliver the work you need to meet your goals time after time.
If you're looking for a Designer who can seamlessly blend creativity, strategic thinking, and technical expertise, let's connect! I'm eager to explore how my skills and experiences align with your organization's goals and how we can collaborate to make a lasting impact. Reach out and let's start a conversation that could potentially shape the future of user experiences.

Pricing Plans

The pricing will be based on the surface level receiving the services.

All plans covers unlimited tasks. Always one task at a time.

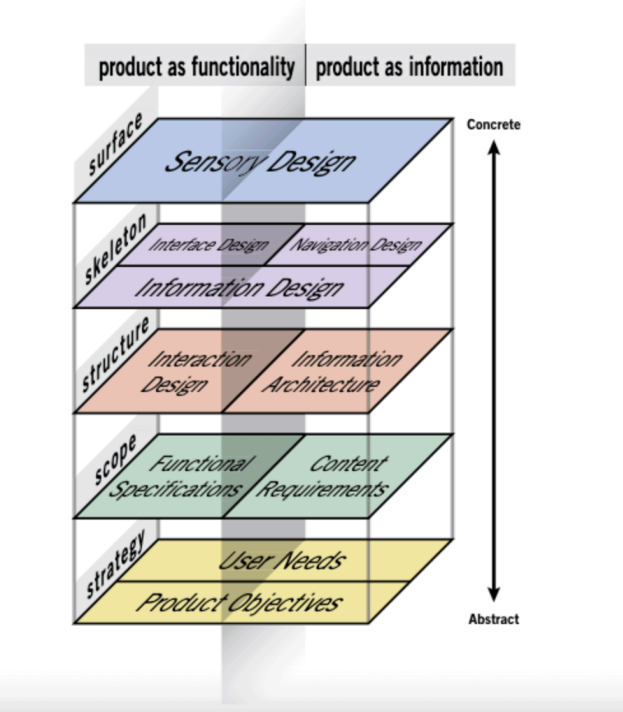
Different types of tasks, have different turnaround times. Rule of thumb is: The deeper the surface level, longer the time.

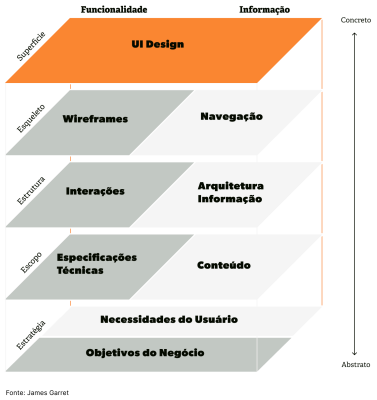
The surfaces are following James Garret approach.

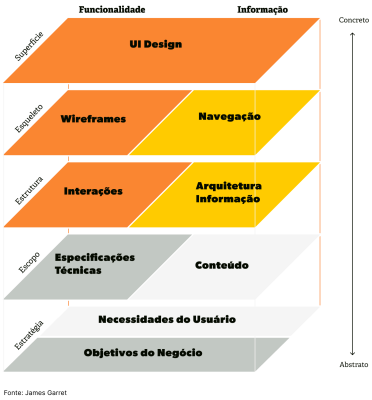
You can navigate through the plans freely and decide which one is best for you at any time.

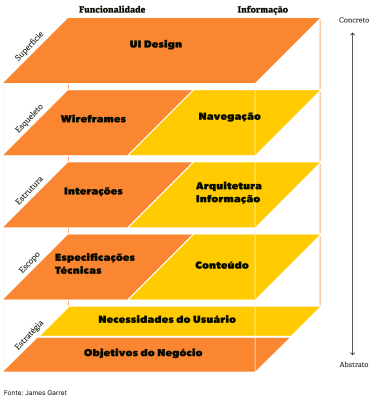
Cancel any time. No questions asked.

7 day trial guarantee.









Plan Surface [How] - UI tasks - 2,4k

1. I will be involved in the visuals of what is produced, but won't be involved in

Plan Structure [What] - Skeleton + Structure - 3.6k

1. Everything involved in the surface plan plus

Plan Strategy [Why] - Scope + Strategy - 5.8k

1. Everything included in the Structure plan plus

the how it will be structured.
